

Foreword by Chairman of Indonesia Association of Publicly Listed Companies (AEI)

Ir. Airlangga Hartarto, MMT., MBA

In late October 2011, Jakarta Composite Index (JSX) Indonesia Stock Exchange (BEI) reached 3790.85. This level was lower compared to the starting position in January 2011 which reached 3727.52. The October level shows a decrease of 1.7 percent. The same condition also occurred when compared to that of in end of June 2011, where there was a decline of 2.51 percent. Nevertheless, if we look closely at the Stock Exchange (JSX) movement during 2011, market did indicate a stable trend. Index always fluctuated in the range of 3600-3800. This situation shows that Indonesian economy is still attractive to investors amid the threat of world economic crisis caused by debt crisis in European countries.

The number of new companies listed on the Stock Exchange for the year 2011 is still fairly high. Up until October 2011 there has been 17 companies that underwent Initial Public Offering (IPO) into the the Stock Exchange, which include PT Indo Straits Tbk. (IDR 95 billion), PT Sidomulya Selaras Tbk. (IDR 53.32 billion), PT Alkindo Naratama Tbk (IDR 33.75 billion), and PT Tifa Finance Tbk (IDR 55.6 billion).

Targets set to be achieved for 2011 is IPO of 25 public listed companies. This means that, to reach our initial target, we still expect eight (8) more companies to undergo public listing. Prospective public companies expected to shortly register into the Jakarta Stock Exchange are, among others, Atlas Resources Tbk., Visi Media Asia Tbk., Golden Energy Mines Tbk., ABM Investama Tbk..

This fairly good condition shows that Indonesian capital market is in a relatively positive position during 2011. Although the market displays effect of impact pressure from economic crisis in Europe, Indonesian capital market is still considered as a good choice for many stakeholders who seek funding, both for investment purposes or for the benefit of working capital. Indonesian capital market has thus proven to have contributed to the Indonesian economy, in particular within the real sectors.

As a forum organization for public listed companies within the Stock Exchange
